DETAILED ACTION

1. Claims 1-16, 21, and 28 have been cancelled.
2. Claims 17 and 22 have been amended.
3. Claims 17-20 and 22-27 are pending.

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11 November 2010 has been entered.

Information Disclosure Statement

2. The Information Disclosure Statement respectfully submitted on 11 November 2010 has been considered by the Examiner.

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Attorney Linda Shudy Lecomte on October 7, 2010.

The application has been amended as follows:

Please amend the following claims:

18. **(Currently Amended)** The method as recited in claim ~~[[46]]~~ **17**, further comprising: generating a second signature by signing the predetermined project data; transmitting the predetermined project data and the second signature to the usage-permission generating device; verifying the second signature for correctness; and the first signature is generated from the predetermined project data only if the second signature verified as correct.

20. **(Currently Amended)** The method as recited in claim ~~[[45]]~~ **17**, further comprising generating an invoice data record for usage of the data processing unit for the client as a function of the predetermined project data.

Response to Arguments

2. Applicant's arguments filed 16 July 2010 have been fully considered and they are persuasive.

Allowable Subject Matter

3. Claims **17-20 and 22-27** are allowed.

4. The following is an examiner's statement of reasons for allowance: The present invention is directed towards a method and communication system for releasing a data processing unit for processing project data of a selected project associated with usage and costs. Claims 17 and 22 identifies the uniquely distinct features **"requesting usage permission for using the data processing unit to process project data belonging to a predetermined project, the predetermined project data being cryptographically protected, verifying the first signature for correctness,**

releasing the data processing unit to process the project data belonging to the project if the first signature is verified as correct, and assigning a client a plurality of value units for the release of the data processing unit for multiple projects, wherein the plurality of value units are devalued at a usage permission generating device in response to a request generated under usage of the verified first client signature for a usage right".

The closest prior art, Nassor (US Patent No. 6,687,800) discloses a chip card comprising means and method for managing a virtual memory and associated communication method. The invention relates to a chip card including an information processing means and main information storage means, which operates to load and unload a programmable memory as a function of the need for the program run by the card and for applicative data. The processing means comprises a means for detecting, during the operation of the chip card, that the main storage means contain a quantity of information such that the execution of an operation is not possible. The chip card also includes a means for selecting, in the main storage means, a set of information to be unloaded. The unloading of the set of information releases enough space in the main storage means to allow the execution of the operation. Also included is a means for unloading the set of information to be unloaded into secondary storage means, in the event that the secondary storage means does not contain the set of information to be unloaded.

However, either singularly or in combination, Nassor fail to anticipate or render obvious the claimed limitations of requesting usage permission for using the data

processing unit to process project data belonging to a predetermined project, the predetermined project data being cryptographically protected, verifying the first signature for correctness, releasing the data processing unit to process the project data belonging to the project if the first signature is verified as correct, and assigning a client a plurality of value units for the release of the data processing unit for multiple projects, wherein the plurality of value units are devalued at a usage permission generating device in response to a request generated under usage of the verified first client signature for a usage right.

The closest prior art, Fehrle (US Patent No. 7,603,445) discloses managing and changing device settings. The system assists in managing and configuring multiple, possibly distributed, devices based on the device templates that can specify configuration parameter values for the devices. The system achieves true integration when every device in a network can be controlled and every event can be seen in real time from a single location. The system integrates a network of individual devices into a single effective system that can be controlled from a central location. The parameter value changes for all device configurations that refer to that template, when a parameter value in a template is changed, thus reducing deployment costs and network complexity, and permitting devices to be configured more efficiently, hence minimizing troubleshooting time.

However, either singularly or in combination, Fehrle fail to anticipate or render obvious the claimed limitations of requesting usage permission for using the data processing unit to process project data belonging to a predetermined project, the

predetermined project data being cryptographically protected, verifying the first signature for correctness, releasing the data processing unit to process the project data belonging to the project if the first signature is verified as correct, and assigning a client a plurality of value units for the release of the data processing unit for multiple projects, wherein the plurality of value units are devalued at a usage permission generating device in response to a request generated under usage of the verified first client signature for a usage right.

5. Therefore, **claims 17 and 22**, and the respective **dependent claims 18-20 and 23-27** are in condition for allowance.

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
